FLEXIBLE

COMMERCIAL

The Independent Smart Pole (ISP) is a hybrid wind and solar powered unit, that provides urban and remote locations with a permanent, renewable power solution, free from external electrical sources.

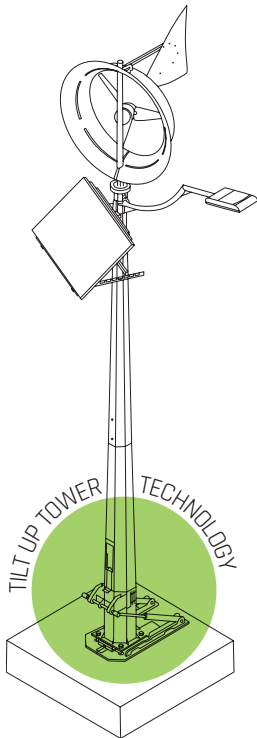

The patented technology increases the velocity of the wind flowing past the blades to generate more power.

The ISP can provide power for lighting, security cameras, air quality monitoring, wi-fi and a host of other applications.

URBAN ENVIRONMENTS AND
REMOTE LOCATIONS CAN
NOW ENJOY A PERMANENT,
RENEWABLE POWER SOLUTION
COMPLETELY FREE FROM AN
EXTERNAL POWER SOURCE.

Combining efficient wind, solar and batteries, it has the capacity to store energy for up to 10 days without wind or sun. This makes it completely reliable and self-sustainable.

The unit is grid independent and has a wide range of applications both urban and remote.

benefits

INVENTIVE

FLEXIBLE

COMMERCIAL

Grid independent

Provides urban and remote locations with a permanent, independent, renewable power solution.

Multi-application

The Independent Smart Pole (ISP) provides power for lighting, security cameras, air quality monitoring, wi-fi and a host of other applications.

Easy to install

The ISP needs no trenching or cabling, saving thousands on installation in urban areas and bringing numerous application possibilities to remote areas.

Auxiliary power

Can provide auxiliary power for lighting car parks, construction sites and any difficult to trench locations.

WITH CAPACITY TO
STORE ENERGY FOR UP
TO **10 DAYS** WITHOUT
WIND OR SUN

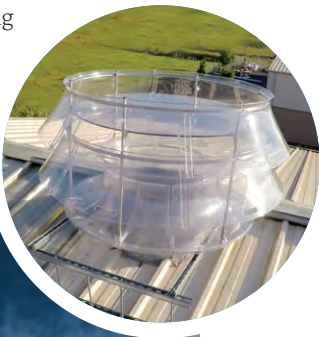

customers/clients

Airsynergy works with major clients across the globe. We are currently engaged with utilities, global retailers, manufacturers, universities, technology leaders and municipalities, delivering groundbreaking solutions and reducing both costs and energy usage.

other products

The application of our ground breaking technologies has delivered a range of award winning products, all based on the movement of air.
